

CYBERSECURITY LAB PORTFOLIO

Scanning · Enumeration · System Hacking

Asha Latha Panuganti | MSc Cybersecurity, Aston University

About this portfolio

This portfolio documents practical security testing carried out in an isolated home/virtual lab environment (Kali Linux against locally hosted or authorised training targets), structured around the standard penetration testing methodology: Scanning, Enumeration (host discovery, service/version detection, traffic analysis, and local account/hash enumeration), and System Hacking (credential attacks). Each entry captures the command executed, the tool's raw output, and the technique it demonstrates.

Tools demonstrated: Nmap (NSE), hping3, Wireshark, Medusa, Hydra, Linux CLI

Environment: Kali Linux attacker VM, isolated lab network (192.168.x.x) and controlled training targets

Contents

1. Scanning
2. Enumeration
3. System Hacking

1. SCANNING

Probing target ports directly with crafted packets to profile port state and service responsiveness.

hping3 — SYN Probe (Port Range 1-100)

hping3 crafted SYN packets sent to 192.168.1.7 across ports 1-100, observing RA (reset-ack) responses and round-trip timings to profile port state.

hping3 — SYN Probe (Port 80)

hping3 crafted SYN packets sent to 192.168.1.1 on port 80, logging SA (syn-ack) responses and latency to confirm the service is listening and responsive.

2. ENUMERATION

Building a detailed picture of the target — live hosts, service versions, session/traffic behaviour, and local account & credential-hash data — ahead of exploitation.

Host Discovery

Wireshark — HTTP Session Capture & Filtering

Wireshark capture filtered on `ip.addr==65.61.137.117`, showing the TCP three-way handshake followed by sequential HTTP GET requests and 200 OK responses for page assets — enumerating the application's session flow and resource structure.

Linux CLI — /etc/shadow Enumeration

cat /etc/shadow on the compromised host, showing password-hash field states and account aging/expiry policy values for each account.

3. SYSTEM HACKING

Gaining access to the target via automated credential attacks against exposed services.
